

Project Design Phase

Proposed Solution Template

Date	01 October 2026
Team ID	SWTID-2026-8542
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	2 Marks

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Creating a complete comic manually requires time, writing skills, illustration skills, and design effort. Users need an easier way to turn a simple story idea into a complete comic with narration, dialogue, and illustrations.
2	Idea / Solution description	ComicCraft is a web-based AI application that accepts a story prompt, character name, setting, tone, and art style. Gemini Flash generates a structured 5-panel outline, Gemini Pro creates narration and dialogue, and Stable Diffusion generates illustrations. The panels are displayed as a preview and can be exported as a PDF.
3	Novelty / Uniqueness	The project combines AI-based story planning, creative narration, dialogue generation, and comic-style image generation in one automated workflow. It produces personalized panel-by-panel comics from user input and supports different tones and art styles.
4	Social Impact / Customer Satisfaction	ComicCraft makes comic creation accessible to students, beginners, storytellers, and non-artists. It reduces the technical effort needed for writing and illustration and allows users to quickly create, preview, save, and share their creative stories.
5	Business Model (Revenue Model)	Proposed model: a freemium approach with basic comic generation available to users and paid plans for higher generation limits, premium styles, faster processing, or additional export features. An API or educational/institutional plan could also provide a revenue stream.
6	Scalability of the Solution	The modular FastAPI architecture allows the application to be expanded with cloud deployment, user accounts, comic libraries, multi-page story arcs, additional AI models, and more art styles. AI services and backend components can be scaled independently as usage increases.
