

PROJECT EXECUTABLE FILES

Date: 3 October 2026

Team ID: SWTID-2026-8542

Project Name: ComicCraft - AI Comic Story Creator using Gemini Models

Maximum Marks: 3 Marks

Step 1: Submission Checklist

Step 2: File / Folder Structure

ComicCraft/ |-- app/ | |-- main.py - FastAPI app, story generation, | | image generation and PDF export | |-- _init_.py - Application package file | |-- templates/ | |-- index.html - ComicCraft web interface | |-- static/ | |-- generated/ - Generated comic panel images | |-- .env/ - Python virtual environment (do not submit) |-- .env - API keys and environment configuration |-- .gitignore - Git ignored files |-- requirements.txt - Python dependencies

Step 3: Technologies Used

Step 4: Deployment / Access Details

Application: <http://127.0.0.1:8000>

API Docs: <http://127.0.0.1:8000/docs>

Login: Not applicable - no login/user accounts

Hosting: Local Windows deployment using Uvicorn

Repository: Use the team's current GitHub repository link

Demo Video: Use the team's Google Drive demo-video link

Step 5: Run Instructions

1. Open Command Prompt / Terminal.
2. `cd C:\Users\hem\OneDrive\Desktop\ComicCraft`
3. `.venv\Scripts\activate`
4. `pip install -r requirements.txt`
5. Configure the .env file with the required API keys. Never share real keys.
6. `python -m uvicorn app.main:app --host 127.0.0.1 --port 8000`
7. Open <http://127.0.0.1:8000> in a browser.
8. Enter the comic prompt, main character and setting; choose tone and art style.
9. Click Generate Comic and wait for the panels.
10. Use Download Comic as PDF or Create Another Comic.

Step 6: Environment Configuration

The current application uses these environment variables:

`OPENROUTER_API_KEY=your_openrouter_key`

`POLLINATIONS_API_KEY=your_pollinations_key`

Keep real API keys private and do not publish them in GitHub or the project document.

Step 7: Known Issues / Limitations

S.No	Item to Submit	Details
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes / if included
3	requirements.txt / dependency file	Yes (requirements.txt)
4	Database schema / seed files	NA - no database used
5	Environment configuration	Yes (.env; keep API keys private)
6	Deployed application URL	NA - runs locally at 127.0.0.1:8000

S.No	Item to Submit	Details
7	APK / Executable binary	NA - web application
8	Dockerfile	NA
9	Test files	NA - not in current structure
10	Demo video	Yes

Component	Technology
Frontend	HTML, CSS, JavaScript
Backend	Python, FastAPI
Server	Uvicorn
Story Generation	OpenRouter API
Image Generation	Pollinations AI
PDF Generation	FPDF2
Templates	Jinja2
Configuration	python-dotenv

S.No	Known Issue / Limitation	Workaround / Status
1	Generation may take time because story and multiple image requests are made.	Wait for completion and use a stable internet connection.
2	Characters can vary slightly between panels.	Regenerate the comic if needed.
3	Image generation depends on Pollinations availability, limits and network connectivity.	Retry later or use a stable network.
4	Story generation depends on OpenRouter availability and rate limits.	Retry later if a temporary error occurs.
5	No database, accounts or saved comic history.	Future versions can add persistent storage.
